Abstracts

Global Military 3D Printing Market is valued approximately USD 1026 Million in 2019 and is anticipated to grow with a healthy growth rate of more than 28.90 % over the forecast period 2020-2027. Military 3D printing, an additive printing technology that enables manufacturers to create artefacts using a variety of printing materials, which has an impact on military logistics by allowing supply personnel to get replacement parts when they are needed. The development of 3D printing technologies, availability of portable 3D printers, increasing investment in defense sector, has led the adoption of Military 3D Printing across the forecast period. For Instance: In 2017 Airbus signed a deal with Stratasys Ltd to manufacture 3D printed polymer parts for the A350 XWB aircraft. After 2015, 3D Systems and the Air Force Research Laboratory (AFRL) signed a contract to develop advanced aerospace and defence 3D printing manufacturing capabilities. Also in 2020 US Air Force successfully created a component for the TF33-P103 engine which is a light weighted propulsion engine which was created using the 3D printer which aims to build light weight aviation components. Also in 2017, a 3D printed anti-ice gasket was created. By partnership between 76th propulsion Maintenance Group, and Air Force of United States of America. However, high manufacturing costs, high maintenance impedes the growth of the market over the

forecast period of 2020-2027. Also, with the increasing demand for light-weight materials, demand of 3D printing materials in aviation industry is likely to increase the market growth during the forecast period.

The regional analysis of global Military 3D Printing market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Europe is the leading/significant region across the world in terms of market share owing to the growing population and promptness & affordability of homeland services coupled with the well-established defense infrastructure. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027. Factors such as rising disposable income, rising incidences of terror activities and improving R&D infrastructure would create lucrative growth prospects for the Military 3D Printing market across Asia-Pacific region.
