Global Military Embedded System Market is valued approximately USD 84 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 6.4 % over the forecast period 2020-2027. An embedded system is a computer hardware system with software embedded in it. It can operate independently or as a part of another larger system, is a microprocessor- or microcontroller-based system, designed to perform real-time analysis and other specific tasks. Military embedded systems are used for wide range of applications including communication equipment, intelligence, surveillance and reconnaissance, command and control systems or computers, data storage devices, and data acquisition equipment. The novel COVID-19 pandemic is affecting major operations and manufacturing sector at halt. The military embedded system is also facing challenges due to COVID-19 pandemic. The technological advancements in network convergence, rising adoption of multicore processor technology, emergence of electronic and network-centric warfare and increased penetration of cloud computing and wireless technologies are the few factors responsible for growth of the market over

the forecast period. Furthermore, the introduction of new products and services along with other strategic alliance by market key players will create a lucrative demand for this market.
