Global Minimally Invasive Thoracic Surgery Market is valued at approximately USD 2.3 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 8.7 % over the forecast period 2021-2027. Minimally Invasive Thoracic Surgery is a way of performing surgeries through small incisions without large cuts or incisions in the body. The increasing cases of chronic diseases have led to the adoption of Minimally Invasive Thoracic Surgery across the forecast period. Rising preferences for minimally invasive procedure enhances the market growth of minimally invasive thoracic surgeries. Also, with the increasing technological advancements and development of new products, the adoption & demand for Minimally Invasive Thoracic Surgeries is likely to increase the market growth during the forecast period.
