Abstracts

Global Mining Lubricants Market is valued at approximately USD 6.40 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 3.8 % over the forecast period 2022-2029. Mining lubricants are utilized as efficiency enhancers and friction reducers in the mining industry. They serve a wide range of mining machines including turbines, compressors, open and closed gears, hydraulic systems, machine tool slide ways, bearings, pneumatic tools, mining transmissions, and others. The market growth is primarily driven by factors such as the growth of the mining industry, increasing adoption of better-quality mining lubricants, and increasing implementation of automatic lubrication systems.

The surging demand for mining equipment is directly associated with market demand across the globe. According to Statista, the global market value of mining equipment in 2019 accounted for USD 121.69 billion, which is likely to reach USD 165.83 billion million by 2027. Thereby, the increasing demand for mining equipment is witnessing high growth in the mining lubricants market worldwide. Moreover, ongoing research related to the development of bio-based lubricants and emerging automated lubrication systems are offering various opportunities over the forecasting years. However, the execution of stringent government regulations is limiting the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Mining Lubricants Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. The Asia Pacific dominated the market in terms of revenue, owing to the growing demand for steel, increasing foreign investments, and the high growth of emerging economies. Whereas, Europe is expected to grow at a significant CAGR during the forecast period, owing to factors such as the availability of abundant mineral resources and increasing consumption of metals and minerals in the regional market.
