Abstracts

Global Mining Renewable Energy Systems Market valued approximately USD 2.87 billion in 2018 is anticipated to grow with a healthy growth rate of more than 7.2% over the forecast period 2019-2026. The Mining Renewable Energy Systems market is on the surging trend considering the global scenario. Mining renewable energy systems are clean sources of power generation used in mining sites, especially for off-grid locations. These sources include solar, wind, biomass and geothermal among others. The market growth is primarily driven by changing preferences of the mining industry towards renewable energy such as wind and solar energy, due to high cost of electricity generation. However, high cost of installation of the systems is expected to hamper the market growth. Based on segments, solar is anticipated to be the dominating segment. As solar is a source of decentralized energy that makes it suitable for mining applications. It provides clean energy by reducing the greenhouse gas emissions; therefore, the demand is likely to increase in the near future.

The regional analysis of Global Mining Renewable Energy Systems Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World.
