Abstracts

Global Mist Eliminator Market is valued approximately USD 0.9 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 4 % over the forecast period 2020-2027. Mist eliminator is also known as demister or separator of entrainment. Basically, the mist eliminator eliminates the pollutants from air pollution from the process, which produces mist droplets. The pollutants are primarily oil mist, coolant mist from the system, acid mist and other entrained mist. Based on processed data, the mist eliminator is sized, engineered and rated for the removal of liquid droplets and other mist up to 3 microns and larger. The mist eliminator eliminates air or soil pollution as well as odour controls and helps comply with environmental regulations. In general, the mist remover consists of corrosion-resistant materials such as PVC, polypropylene and stainless steel and is vertically and horizontally configured. The market is driven by globally rising power demand, tightening pollution regulations, Social benefits and the existence of different policies designed to encourage the use of the system, the

existence of different regulations and compliance with the environmental impact of different industries, increased demand from the application of power generation due to the overall growth of the industry, various research and development activities carried out by manufacturers to provide. The key players of global Mist eliminator market have adopted various strategies to gain competitive advantage including product launch, mergers and acquisition, partnerships and agreements, investment, funding and others. For instance, In June 2020, CECO Environmental Corp. acquired Environmental Integrated Solutions Limited, a UK-based company providing clean air products and technologies such as odour prevention, VOC elimination, and other solutions for air pollution control. However, decreasing trend in the oil and gas industry, the existence of environmentally clean energy sources, the high costs associated with the installation and maintenance of these products are expected to impede the growth of the market.

The regional analysis of global Mist Eliminator Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of tightening pollution regulations, increased demand from the application of power generation due to the overall growth of the industry, various research and development activities carried out by manufacturers to provide. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027. Factors such as Globally rising power demand, Social benefits and the existence of different policies designed to encourage the use of the system, the existence of different regulations and compliance with the environmental impact of different industries, would create lucrative growth prospects for the Mist Eliminator Market across Asia-Pacific region.
