Abstracts

Global Mixed Tocopherol Market is valued approximately USD XXX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Tocopherol is an organic chemical molecule that occurs naturally in a variety of foods, including nuts, oils, and vegetables. The important forms of vitamin E are termed tocopherols, which are a class of phenolic chemicals that may be dissolved in fat. Soybeans have a comparatively high proportion of tocopherols, which are essential antioxidants. Only photosynthetic organisms can produce tocopherol, which serves as a protective component. Oils, fats, and protein meals may all be preserved with mixed tocopherols, a natural antioxidant. Alpha-tocopherol, delta-tocopherol, gamma-tocopherol, and beta-tocopherol are the four isomers of mixed tocopherols that are found in vitamin E. The market growth is driven by key factors such as demand for nutritious products, growing demand for dietary supplements and increasing Cases of Chronic Diseases.

Statista estimates that it will be valued around 137 billion US dollars in 2021. The market has been expanding since 2018, and it is anticipated to keep expanding through 2028, when it is estimated to reach USD 239.4 billion. On the other side, it was predicted that the global market for customized nutrition products will be valued 8.2 billion US dollars in 2020. A sizable market expansion is anticipated. The market is anticipated to double in size by 2025 from its level in 2020. It is anticipated that the

compound annual growth rate would reach 15%. However, increasing raw material prices and high cost involved in R&D Activities stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Mixed Tocopherol Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. Asia Pacific is dominating the overall market share owing to rising meat consumption in the region over the forecast period.
