Global Mobile Computed Tomography Scanners Market is valued at approximately XXX million in 2021 and is anticipated to grow with a healthy growth rate of more than xx% over the forecast period 2022-2028. A mobile CT scanner is a computed tomography system on wheels. Mobile CT head imaging reduces the number of ICU patient scans performed in the radiology department, potentially resulting in more streamlined utilization of stationary systems and staff. The rising prevalence of chronic diseases such as cancer, cardiovascular, orthopedic, and neurology can be attributed to the market's growth. According to the National Cancer Institute (NCI), the United States' Cancer Research Agency, the number of new cancer cases per year is expected to rise to around 30 million by 2040, with the number of cancer deaths rising to around 16 million. Furthermore, the prevalence of unhealthy lifestyles, such as sedentary work, poor diet, and tobacco and alcohol use, is expected to drive market growth during the forecast period. According to a World Health Organization (WHO) report, alcohol consumption will be responsible for approximately 4% of cancer diagnoses worldwide in 2020. Furthermore, increasing awareness about the targeted diseases, the ease of access to medical facilities, and awareness campaigns on the importance of early diagnosis are some of the factors expected to drive the global mobile computed tomography scanners market growth over the forecast period. However, there are some side effects associated with the mobile computed tomography scanners, such as headache, nausea, and so on, which are limiting demand in some regions.

The key regions considered for the global Mobile Computed Tomography Scanners market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. Asia Pacific region's market is expected to grow modestly during the forecast period, owing to the rising prevalence of cancer, cardiac diseases, and other chronic diseases throughout the region. Furthermore, due to the availability of major medical device manufacturing companies, rising expenditure on research and development, and innovation advancements in medical devices to improve medical facilities, the market in North America is expected to hold the second-largest share in the global mobile computed tomography scanners market over the forecast period.
