Abstracts

Global Mobile and Wireless Backhaul Market is valued approximately at USD 9.3 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 8.8% over the forecast period 2021-2027. Wireless and mobile backhaul gathers data from users and transports it to a network, such as an academic institution, government agency, or major institution, or to the internet. The mobile and wireless backhaul helps manage and distribute large amounts of data, which is advantageous to the user since it improves the user's experience. Due to increased smartphone penetration and improved connection, the number of mobile internet users around the world is quickly growing. Increased internet connectivity has resulted in an increase in mobile data traffic throughout the world. The need for network bandwidth has risen dramatically as mobile data traffic has gained popularity. For instance, as per Statista, in 2021, the number of smartphone users in India is expected to exceed 760 million, with the global number of smartphone users expected to exceed 3.8 billion. China has about 912 million smartphone users in 2021, more than any other country. India had the second-highest number of smartphone users, though it was less than half as compared to China. Furthermore, growing adoption of small cells further propel the market growth in the upcoming years. However, case-by-case examination before certain deployments may impede market growth over the forecast period of 2021-2027.

The APAC mobile and wireless backhaul market is expected to develop rapidly in the

next years. With the continual growth in mobile data traffic, APAC has a lot of potential in terms of backhaul installations because the region is seeing a lot of spending. Large-scale investments have resulted from the shift in mindset from traditional wired backhaul to wireless connections.
