Global Molecular Imaging Market is valued approximately USD 4.77 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 7.9% over the forecast period 2021-2027. Molecular imaging is in demand as it gives the detailed picture of functions in the body at molecular level which is used to diagnose several diseases. Rise in healthcare expenditure and emergence of artificial intelligence in radiology are the driving factors for the adoption of Molecular Imaging across the forecast period. Adoption and advancements in technologies such as PET/CT, MRI, robotics, non-ionizing imaging techniques, and Nano-biotechnology has helped to market to grow. Molecular imaging devices produces minimal ionizing radiations and thus, eliminating the chances of risk. According to World Health Organization (WHO), per capita healthcare expenditure was USD 351 in 2000 has grown to USD 926 by 2018. However, requirement of digitization and higher cost of investment restraints the growth of the market over the forecast period of 2020-2027. Also, increase in functionality of products and rapid pace of innovation is likely to boost the market growth during the

forecast period.
