## **Abstracts**

Global Molecular Weight Marker Market is valued at approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2021-2027. A molecular-weight size marker also referred to as a protein ladder, DNA ladder, or RNA ladder is a set of standards that are used to identify the approximate size of a molecule run on a gel during electrophoresis, using the principle that molecular weight is inversely proportional to migration rate through a gel. Increased research and development spending by biotechnology companies and growing pharma market as well as research funding in the public sector have led to the adoption of Molecular Weight Marker across the forecast period. For Instance: According to the Indian Economic Survey 2021, the domestic market is expected to grow 3x in the next decade. India's domestic pharmaceutical market is estimated at US\$ 42 billion in 2021 and likely to reach US\$ 65 billion by 2024 and further expand to reach US\$ 120-130 billion by 2030. Also, with the emerging and untapped markets, the adoption & demand for Molecular Weight Marker is likely to increase the market growth during the forecast period. However, lack of skilled professionals impedes the growth of the market over the forecast period of 2021-2027.

The key regions considered for the global Molecular Weight Marker market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share owing to the growing partnerships between academic, biotechnology & pharmaceutical companies. Whereas, Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as increasing R&D for proteomics and genomics research would create lucrative growth prospects for the Molecular Weight Marker market across Asia Pacific region.
