Abstracts

Global Monkeypox Vaccine and Treatment Market is valued at approximately USD 78.34 million in 2021 and is anticipated to grow with a healthy growth rate of more than 10.2% over the forecast period 2022-2029. The monkeypox virus, a species of the Orthopoxviral genus in the family Poxviridae, is the culprit behind monkeypox. The monkeypox vaccines employed in the smallpox eradication operation also offered protection from that disease. The Monkeypox Vaccine and Treatment market is expanding because of factors such as an increase in the prevalence of monkeypox infection, and high government initiatives to combat outbreaks of monkeypox. However, side effects associated with the vaccine and treatment may halt market growth.

For instance, according to information from the Centers for Disease Control and Prevention, there are estimated to be 31,800 confirmed cases of monkeypox worldwide through August 9, 2022, of which 31,425 are in nations that have never previously reported monkeypox. While there are 375 nations where monkeypox has previously been documented. Additionally, it was discovered that between April and June 2022, 98% of the monkeypox infections in 16 nations worldwide were in males who have sex with men and LGBT groups, per a report published in the New England Journal of Medicine. Thus, the rising prevalence of monkey pox disease across the globe is catering for the growth of the market. Furthermore, rising technological advancement in the development of vaccines and rising government initiatives for research and activities

are creating lucrative growth in the market. However, the side effects of the Monkeypox Vaccine and Treatment stifle market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Monkeypox Vaccine and Treatment Market study includes Asia Pacific, North America, Europe, Latin America, and the Rest of the World. Among these regions, North America holds the highest share in the year 2021 owing to factors such as the rising prevalence of disease, and rising government investment in research and development is anticipated to provide lucrative growth in the market. Asia Pacific is projected to witness the fastest region owing to factors such as rising number of monkeypox infections and increasing research and development for developing vaccines driving the growth of market.
