Abstracts

Global Multimodal Imaging Market is valued at approximately USD XX billion in 2022 and is anticipated to grow with a healthy growth rate of more than 5.2% over the forecast period 2023-2030. Multimodal imaging is used to research the structure and functioning of the placenta as well as other traits including embryo development. These studies are often carried out in transgenic mice. The function and architecture of the foetal and maternal vascular systems, as well as the structure and internal exchanges of the placenta, may all be improved with the use of newly developed imaging tools. Significant development in Multimodal Imaging market due to growing Prevalence of Chronic Illness and rise in the healthcare expenditure.

According to Statista, the projected number of chronic illness patients in Italy between 2028 and 2038. Data indicate that 25,233 thousand people might have at least one chronic ailment by 2028, compared to 13,907 thousand people who could have at least two chronic illnesses in the same year. By 2038, 14,673 thousand Italians are expected to be concerned about two or more chronic illnesses. Furthermore, The American Cancer Society predicts that in 2019, there will be around 606,880 cancer-related deaths in the United States, or 1,660 each day. The market is booming in the area as a result of the rising prevalence of chronic illnesses and the quick uptake of technologically sophisticated imaging devices. Moreover, increasing usage in the non-invasive diagnostic procedures and availability of advanced healthcare infrastructure

create lucrative opportunities in the upcoming years. However, lack of appropriate healthcare infrastructure and high price of the multimodal imaging system stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Multimodal Imaging Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America is leading the global market share owing to increase in the aging population, rise in the healthcare expenditure. However, Asia Pacific is expected to be the fastest growing region due to rising development related to new imaging technique and rising healthcare industry.
