Abstracts

Global Multiparameter Patient Monitoring Systems Market reached USD 10.41 Billion in 2020. The Global Multiparameter Patient Monitoring Systems Market tends to grow by a CAGR of 5.69% in the 2021-2027 period.

Multiparameter monitoring systems are used to detect various readings including heart rate, cardiac activity (ECG), blood pressure, respiration, oxygen, temperature, of patients on the live screen. The major driving factor helping in market growth is frequent health checkups, Covid19 virus and other diseases that requires internal organ readings through monitoring systems. Another trending factor is growing demand for accurate and real-time monitoring. As the market is fragmented, players have to keep themselves updated with the market requirement and expand their product line accordingly. The major restraint in this market is the high cost of machines. Under the end-user segment, hospitals accounted for the largest market and continue to hold the prominent position owing to the increasing incidence of diseases, injuries, accidents, and other emergencies. In device type, portable monitoring system is holding the major share of this market because it provides ample advantages such as lightweight and easy transport within or outside the hospital.

The key regions covered in the global Multiparameter Patient Monitoring Systems market are North America, Latin America, Europe, East Asia, South Asia-Pacific, and the Middle East & Africa. North America accounted for the largest market share and it is

estimated to grow in the forecasted period because of advanced technologies introduced by the players, and public-private partnerships. The Asia Pacific is expected to grow faster in the future owing to the developing economy and government spending on the healthcare sector.
