Abstracts

Global Myasthenia Gravis Market is valued approximately USD 1 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 7.2% over the forecast period 2021-2027. Myasthenia gravis is a chronic autoimmune and neuromuscular disease that leads weakness in the skeletal muscles. The disease worsens when muscles are active and improves after rest. These affected muscles are responsible for breathing and moving arms, legs and other parts of the body.

The growing adoption of immunotherapies used to relieve the symptoms and problems associated with myasthenia gravis along with the regular approval of hopeful drugs and treatments of this disease are propelling the market of Myasthenia Gravis. The increasing awareness of rare diseases among people, coupled with the growth of biosimilars and biologics industry, are driving the Myasthenia Gravis market. There are no known causes of Myasthenia Gravis and it can target anyone. National Organization for Rare Diseases reports that autoimmune myasthenia gravis has a prevalence of approximately 14-40 per 100,000 individuals in the United States. It also states that estimated 10 percent of patients affected by this disease may develop potentially life-threatening complications due to severe involvement of muscles, including those used during breathing. Organization also observes autoimmune myasthenia gravis more often affects women than men. The lack of awareness and testing of this disease and mis-diagnosis of Myasthenia Gravis may act as a restraint for its growth. However, increasing efforts from government and private players to understand this disease through studies and research acts as an opportunity for Myasthenia Gravis Market in subsequent decade.

Key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World are analysed to provide a holistic picture of Myasthenia Gravis Market. Due to higher awareness for autoimmune diseases and their treatment as well as higher per capita income, North America has emerged as the significant region across the world in terms of market share. Whereas, Asia-Pacific is expected to exhibit highest growth rate for the forecast period 2021-2027 owing to the growing diagnosis of the disease and better healthcare infrastructure. Rising disposable income and governmental push for the study of rare diseases will also boost growth in this region.
