Abstracts

Global Nasal Cannula Market is valued approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 8% over the forecast period 2021-2027. The nasal cannula is a device used to carry supplemental oxygen or increased airflow to a patient in need of respiratory assistance. They may be used in a variety of ways - hospital settings, at home, or on-the-go. The rising geriatric population worldwide, coupled with the increasing incidences of respiratory problems, are driving the Nasal Cannula market. The governmental support for the eradication of respiratory illness is helping the nasal cannula market to propel. According to World Health Organization, the number of people aged 65 or above is expected to touch nearly 1.5 billion in 2050 from 524 million in 2010, with developing countries registering the most of the increase in numbers. The number of older people in developing countries is expected to increase by more than 250 percent, in contrast with a 71 percent increase in developed countries between the period 2010 and 2050. The rising geriatric population highlights the need for nasal cannula to treat the respiratory problems. The chronic respiratory illness is also increasing. WHO also reports that Asthma affected an estimated 262 million people in 2019 and caused 461000 deaths. The lack of awareness about the use of nasal cannula may act as a restraint for its growth. However, increasing efforts from scientists and researchers for the technological advancements in the cure of respiratory illness acts as an opportunity for Nasal Cannula Market in subsequent decade.

Key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the

World are analysed to provide a holistic picture of Nasal Cannula Market. Due to increasing adoption of nasal cannula as well as higher per capita income, North America has emerged as a significant region across the world in terms of market share. Whereas, Asia-Pacific is expected to exhibit the highest growth rate for the forecast period 2021-2027 owing to the growing population with chronic respiratory diseases. Rising disposable income and growing awareness for nasal cannula will also boost growth in this region.
