## Abstracts

Global Natural Gas Storage Market is valued at approximately USD XX billion in 2022 and is anticipated to grow with a healthy growth rate of more than XX% during the forecast period 2023-2030. Natural gas storage is the process of storing natural gas for future use. This is essential because the demand for natural gas can vary throughout the year, with higher demand during the colder months for heating and during peak times for electricity generation. Storing natural gas allows for a reliable and continuous supply to meet fluctuations in demand. The key factors driving the market growth are growing demand for natural gas, rising investments in the development and expansion of natural gas storage infrastructure, and supportive government policies and regulations that are anticipated to support the market growth during the forecast period 2023-2030.

Additionally, the growth of natural gas production creates a need for reliable storage solutions to manage the inherent variability in supply and demand. Natural gas storage facilities provide the necessary flexibility and resilience to the natural gas supply chain. According to Statista, in 2020 natural gas production worldwide was 3,861.5 billion cubic meters and in 2022 natural gas production reached 4,089 billion cubic meters. As a result, the growing natural gas production globally is anticipated to support the market growth. Moreover, advances in storage technologies and a growing shift towards renewable energy sources are anticipated to create lucrative opportunities for the market over the forecast year. However, the high initial capital costs stifle market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Natural Gas Storage Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to the increasing natural gas production, ongoing investments in natural gas infrastructure, and supportive regulatory frameworks and policies. Whereas, the Asia Pacific is expected to grow with the highest CAGR over the forecast period, owing to factors such as the increasing energy demand, the growing shift towards natural gas, and cohesive government initiatives and policies.
