Abstracts

Global Naval Shipbuilding Market is valued at approximately USD xxx billion in 2021 and is anticipated to grow with a healthy growth rate of more than xxx% over the forecast period 2022-2029. Naval shipbuilding refers to the process of designing, constructing, and maintaining ships that are used for military purposes. These ships are specifically built to operate in a maritime environment and are equipped with weapons and other systems to support military operations at sea. The Naval Shipbuilding market is expanding because of factors such as increasing geo-political conflicts and the growing number of maritime trades.

The design of the ship, installation of weapons systems, and construction of the vessel are all part of naval shipbuilding. The naval ship is also tested and evaluated to ensure that it meets performance and safety requirements. According to the Council on Foreign Relations, The United States and China have had disagreements over the sovereignty of islands and maritime areas in the South China Sea. China has claimed most of the South China Sea, which is rich in natural resources and a key shipping lane, as its own territory, while the U.S. has insisted on the freedom of navigation and overflight. The U.S. has conducted several freedoms of navigation operations in the area, which involve sending naval vessels close to disputed islands or areas, to challenge China's claims. These operations have sometimes resulted in close encounters and warnings from Chinese military vessels. Another important component driving space increase is the number of maritime trades. As per Statista, in 2020 Asia accounted for most of the global maritime trade. The ports of the region loaded nearly 42% and unloaded roughly

67% of all goods transported by sea worldwide, China which accounts for some of the world's largest seaports. In addition, the volume of global seaborne trade is expected to be around 11 billion tons in 2021. Also, advancements in shipbuilding technologies and growing demand for seaborne surveillance would create a lucrative growth prospectus for the market over the forecast period. However, the high cost of Naval Shipbuilding stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Naval Shipbuilding Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the increasing demand for cross-border surveillance and rising emphasis on naval modernization. According to the Statista, In the year of 2023, the U.S. Navy had 49 Nuclear Attack Submarines and 11 aircraft carriers at their disposal. In total, the U.S. Navy had 285 battle force ships at their disposal in that year. Furthermore, Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to an increase in naval investments by the neighboring countries to procure and modernize their naval fleet, and active participation of government organizations in the market space.
