Global Naval Vessel Maintenance, Repair, and Overhaul (MRO) Market is valued at approximately USD 52.5 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 1% over the forecast period 2020-2027. The method of returning a naval vessel to a condition that it can operate at its best is known as maintenance, repair, and overhaul (MRO). Throughout their lives, naval warships are exposed to routine repairs. The equipment and services needed for repairs are determined by the platform and the type of repair work to be performed at any given time. The average age of naval vessels in the North America is more than 15 years. Due to the high age of support vessels around the world, the demand for servicing, repair, and overhaul activity is expected to increase in the forecast years to ensure their stable service. Aside from MRO, the navies are updating the facilities aboard naval vessels with modern and improved payloads that will improve their capabilities and situational awareness. In this respect, the Israeli Navy upgraded the operating capability of Saar 4.5 and Saar 5 missile ships in 2017 by installing the advanced ALPHA (Advanced Lightweight Phased Array) ELM-2258 radar system. The ALPHA system is a portable revolving AESA radar that can identify and classify naval targets, monitor a wide range of maritime and aerial targets, and be integrated into guided missile protection and attack systems. During the forecast period, certain navies' modernization plans are expected to accelerate the market growth. However, retirement of maintenance-intensive vessels and environmental hazards, may impede market growth over the forecast period of

2020-2027.

The regional analysis of the global Naval Vessel Maintenance, Repair, and Overhaul (MRO) Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World.
