The Near field communication chip market is on the surging trend on the global scenario. The Near field communication is mainly an array of protocols which is based on a specific wireless interface which enables the communication devices and electronic gadgets to set up communication with each other under proximity. Also, the Near field communication chips specifically can be described as small electronic device which operates on a wireless link that utilizes the magnetic field induction for transmitting data & to establish wireless connection. The near field communication chip has the ability of identifying various near field communication chip in proximity of upto 4cms. One of the pivotal benefit of utilizing NFC is that the devices when in close proximity directly connects automatically in real time. The Near field communication chip market is mainly driven owing to escalating utility in the consumer electronics sector which includes smart phones, tablets, wireless charging devices, boom boxes, headphones and in the Internet of things devices. The Near field communication technology is significantly being adopted by many sectors which includes retail, automotive, healthcare & medical. In the automotive sector the multinational automobile manufacturers which includes Honda, Ford, Toyota and

Hyundai are keenly deploying NFC chips into both the passenger vehicles mainly in the cars and commercial vehicles aiming to support the feature of keyless entry in which the vehicle doors automatically locks & unlocks when the user reaches the proximity distance of the vehicle. Also, the multinational organizations such as Google corporation and Apple Inc have also launched applications such as Apple pay and android pay which precisely operates on near field communication technology which is further augmenting the adoption and growth of Near field communication chip market on the global scenario. However, the concerns related to rising data privacy & data security, lack of interoperability, easy availability of substitutes such as Bluetooth and high cost of NFC chips are acting as restraining factors considering the growth of Near field communication market during the forecasted period.
