Abstracts

Global Neonatal (Preterm) Infant Care Market is valued approximately at USD XXX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 9.25% over the forecast period 2021-2027. Hypothermia, reduced fat and glycogen, and other problems are more likely to prevail in preterm newborns owing to heat loss. According to the World Health Organization (WHO), over 15 million infants are born prematurely each year, with around 1 million of them dying as a result of preterm problems. One of the most challenging responsibilities is keeping an eye on newborns. Introducing sophisticated newborn baby care technology has remained important in managing newborn health complications. The market is being driven by surge in the incidences of premature birth and increasing prevalence of neonatal hospital-acquired infections. For instance, according to a research published in the Oxford Academic Journal, around 74

percent to 77 percent of 1,120 enrolled neonates suffering from hypothermia after birth between August 2018 and March 2019. Furthermore, one of the key factors for market expansion is increased investment by regional governments as well as key manufacturers in various emerging nations. For example, in March 2019, MTTs Asia joined the Business Call to Action (BCtA) to provide newborn care to roughly 495,000 low-income patients in 10 African states, as well as medical equipment to over 200 institutions. However, lack of technical products as well as skilled personnel may impede market growth over the forecast period of 2021-2027.

During the forecast years, the market in the North American region is likely to rise at a rapid pace. The increased availability of modern healthcare systems and NICU divisions in hospitals in this region is driving the market expansion in this region.
