Abstracts

The Global Network Functions Virtualization Market is valued at approximately USD 19.48 Billion in 2021 and is anticipated to grow with a healthy growth rate of more than 22.9% over the forecast period 2022-2028. Network Functions Virtualization can be defined as the virtualization of virtualized network services, such as load balancers, firewalls, and routers, that historically operates on proprietary hardware. Network Functions Virtualization combine multiple physical networks into one virtual, software-based network. In addition, it can also divide one physical network into separate, independent virtual networks. It assists in reducing power consumption, optimizes network and related functions, which overall reduces equipment cost. The increasing emergence of Cloud Services and rising adoption of Network Virtualization and Automation as well as strategic initiatives from leading market players are key drivers accelerating the growth of the Global Network Functions Virtualization Market. For instance, according to Statista – in 2021, Public cloud services end-user spending worldwide was estimated at USD 410.92 Billion, and this number is projected to grow to USD 599.84 Billion by 2023. Moreover, leading market players are working towards strategic collaborations to capitalize on the growing adoption of the Network Functions Virtualization Market. For instance, in September 2020, Samsung, Hewlett Packard, Intel, and SK Telecom entered into a strategic partnership to develop an NFV platform for the 5G network. Also, the rising penetration of data-intensive applications and cloud-

based services and the increasing adoption of IoT connected devices would offer lucrative opportunities for Global Network Functions Virtualization (NFV) Market during the forecast period. However, rising concern over security threats associated with NFV impedes the Market growth during the forecast period of 2022-2028.

The key regions considered for the Global Network Functions Virtualization Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the space in terms of revenue in, owing to the rapid increase in the usage of technologies such as cloud computing, the Internet of things (IoT), as well as the presence of leading Market Players. Whereas Asia Pacific is estimated to grow significantly during the forecasted period, owing to factors such as the rising penetration of technologies like Software Defined Everything (SDE), cloud computing, and the Internet of Things and the increasing emergence of NFV infrastructure in the region.
