Abstracts

Global network optimization services market is valued approximately at \$7.4 billion in 2020 and is anticipated to grow with a healthy growth rate of about 13.7 % over the forecast period 2021-2027. Network optimization services refer to the set of practices adopted to improve performance of the network. Different techniques and tools can be used to improve and monitor the network performance including minimizing latency, load balancing, bandwidth management and packet loss monitoring. The global network optimization services market is being driven by increasing number of branch offices and

data centers and growth in the usage of IP video and virtualization. Furthermore, technological advancements in network infrastructure will provide new opportunities for the global network optimization services industry. According to Statista, the market revenue of colocation data center across the globe is expected to increase from \$31.39 billion in 2019 to approximately \$58.28 billion in 2025. Such increase in the data centers is expected to increase the adoption of network optimization services to enhance performance and efficiency and is expected to drive the market growth during the forecast period. However, high capex investment and budgetary constraints on IT investments may impede market growth over the forecast period of 2021-2027.

The regional analysis of the global network optimization services market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the leading region across the world in terms of market share due to factors such as increase in the number of branch offices and data centers, technological advancements, relatively lower infrastructure costs, etc. Asia Pacific is anticipated to exhibit the highest growth rate over the forecast period 2021-2027, due to factors such as rising demand for IP video and virtualization majorly in countries such as Japan, India, and China etc. in the region.
