Abstracts

Global Network Probe Market is valued at approximately USD 0.45 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 12.3% over the forecast period 2021-2027. Device interconnection and virtualization technology have grown rapidly as a result of the increased usage of modern technologies. As a result, the number of cyber-attacks and security breaches has increased dramatically, necessitating the development of a proper network performance and security testing system. As a result, businesses have begun to use network probes to gain a better understanding of their network architecture. Network probe solutions protect both wired and wireless networks, as well as the entire network, lowering the risk of cyber assaults. Small and medium-sized businesses (SMEs) are adopting new technologies such as cloud, artificial intelligence (AI), software defined networking (SDN), and the Internet of Things (IoT) to boost overall productivity. They're also using Network Probe solutions to control and run their networks more efficiently. Attacks on network security, increased labour efficiency, and cheaper costs are all driving drivers for network probe tool use. As a result, SMEs would provide new prospects for network probe vendors. However, Lack of technical granularity may impede market growth over the forecast period of 2021-2027.

The regional analysis of the global Network Probe Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World (ROW). North America is the leading region across the world in terms of market share due rise in the number of cyber-attacks such as malware, virus, and DoS on enterprise networks in the region. Whereas Asia Pacific is also anticipated to exhibit the

highest growth rate over the forecast period 2021-2027, due to growth in the amount of data traffic within organization networks
