Abstracts

Global Network Security Sandbox Market is valued approximately USD 3.96 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 52.61% over the forecast period 2022-2028. A network sandbox is a secure testing environment that gives security teams the ability to monitor, examine, detect, and stop suspicious network traffic. A network sandbox offers an additional line of security against attack vectors that were not previously identified. When suspicious files are allowed to execute in a separate environment that simulates an actual end-user operating environment, security teams can perform advanced malware analysis. The rising expansion of cloud technologies & virtual networks and increasing demand for new and upgraded security solutions are key factors driving the growth of the Market. For instance, according to Statista – during 2020, the global cyber security market was valued at USD 183.34 billion, and the market is projected to grow to USD 538 billion by 2030. Moreover, in 2019, Palo Alto Networks launched Prisma, a cloud protection stage intended to help its customers lead computerized life in a safer manner. Also, the increasing number of cyber threats and the rising emergence of IoT and AI technologies would create lucrative opportunities for the market during the forecast period. However, the high costs associated with sandbox security infrastructure coupled with rising glitches in software impedes the market growth throughout the forecast period of 2022-2028.
