Abstracts

Global Neurology Patient Monitoring Market is valued at approximately USD 3.7 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 7.0 % over the forecast period 2022-2028. Neurology Patient Monitoring is basically providing an opportunity to treat and diagnose patients facing neurological diseases. Its major application is in Trauma, stroke, hydrocephalus, EEG and CSF management etc. The increasing incidences of neurological disorders have led to the adoption of Neurology Patient Monitoring across the forecast period. For Instance: according to the Pan America Health Organization in 2019, the cases, number of deaths and patients with neurological disorders are increasing rapidly in various regions including the United States, Canada, Uruguay, Suriname, Honduras, Bolivia and Cuba etc. As per the same source in 2019, approximately 533,172 patients were facing stroke and trauma and other neurological disorders etc. According to the Institute for Health Metrics and Evaluation in 2019, the rising cases of neurological disorders are the major cause of death and disability globally. Growing demand for minimally invasive neurosurgeries enhances the market growth of neurological patient monitoring. Also, with the increasing awareness and investment towards healthcare, the adoption & demand for Neurology Patient Monitoring is likely to increase the market growth during the forecast period. However, high procedural cost impedes the growth of the market over the forecast period of 2022-2028.

The geographical regions considered for the global Neurology Patient Monitoring market analysis include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the significant region across the globe in terms of huge

market share due to the growing technological advancements, increasing incidences of neurological disorders and rising EEG procedures. Whereas, Asia-Pacific is also estimated to attain a maximum growth rate during 2022-2028. Factors such as rising awareness regarding healthcare such as stroke, increasing healthcare spending and government initiatives would create beneficial growth forecasts for the Neurology Patient Monitoring market across Asia-Pacific region.
