Abstracts

Global Neurothrombectomy Devices Market is valued approximately at USD 603.9 million in 2019 and is anticipated to grow with a healthy growth rate of more than 6.5% over the forecast period 2020-2027. A neurothrombectomy device is approved by the Food and Drug Administration (FDA) as a device intended to retrieve or destroy blood clots in the cerebral neurovasculature by mechanical, ultrasound technologies, laser, or combination of technologies. This medicine helps to bring down the death rate in patients. The increasing incidences of stroke coupled with growing geriatric population worldwide are the few factors responsible for growth of the market over the forecast period. For instance: According to the United Nations, Department of Economic & Social Affairs, there were 703 million persons aged 65 years or over in the world in 2019 and is projected to double to 1.5 billion in 2050. Similarly, as per Statista, the American geriatric population (65 years old or more) was 16% in 2018 and is anticipated to rise by 22 % of American geriatric population in 2050. Thus, growing geriatric population worldwide and increasing incidences of stroke drives the growth of the market over the forecast period. However, the risks associated with the neurothrombectomy procedure is the major factor restraining the growth of global Neurothrombectomy Devices market during the forecast period.

The regional analysis of global Neurothrombectomy Devices market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Europe is the leading/significant region across the world in terms of market share owing to the fast adoption of new technology and increasing number of patients
