Abstracts

Global Non-Genetically Modified Organisms Food Market is valued at approximately USD XXX Billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. Non-GMO food is prepared without using ingredients associated with genetically modified organisms. Thus, rising demand from the agricultural sector and rising number of chronic diseases, such as gastrointestinal disorders, cancer, organ damage, and others are factors contributing to the market growth. For instance: According to National Cancer Institute, the number of cancer patients is expected to rise to 29.5 million cases, by the year 2040 from 18.1 million cases, in the year 2018. However, high prices of non-GMO food products impede the growth of the market over the forecast period of 2022-2028. Also, rapid innovations in the R&D activities and increasing number of health-conscious consumers are likely to increase the growth of the market in the forecasting period.

The regional analysis of global Non-Genetically Modified Organisms Food market includes Asia Pacific, North America, Europe, Latin America and Rest of the World for analysis and estimation. North America is the leading region across the world in terms of market share owing to eco-friendly nature and reduction of chemical usage during production. Whereas, Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. Factors such as rising consumer awareness of the benefits of non-GMO food would create lucrative growth prospects for the Non-Genetically Modified Organisms Food market across Asia Pacific region.
