Abstracts

Global Non-Invasive Intracranial Pressure Monitoring Market is valued approximately USD XXX billion in 2019 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2020-2027. Intracranial pressure monitoring denotes the system utilized to measure and monitor the intracranial pressure (ICP). The pressure inside the skull is termed as ICP and this pressure in the cerebrospinal fluid (CSF) and brain tissue is produced by trauma or other diseases. ICP monitoring has widespread applications in the diagnostics and post-operative treatments of the patient suffering from cranial injury. The growth of the market is primarily driven by surging incidence of brain injuries and neurological disorders. For Instance: as per Neural Organization UK, 1.6 million people were admitted with a neurological mention in 2016/17 in UK while over 1 million people were admitted as emergencies with a neurological mention in the same period. Moreover, the rate of admissions have increased by 24% and 21% respectively. Additionally, shifting preference towards the non-invasive from invasive monitoring is further propelling the growth of the market. However, lack of skilled technicians impedes the growth of the market over the forecast period of 2020-2027.

The regional analysis of global Non-Invasive Intracranial Pressure Monitoring market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across

the world in terms of market share owing to the surging incidences of brain injury and well-established healthcare infrastructure in the region. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027. Factors such as rising population and swelling investments in healthcare industry would create lucrative growth prospects for the Non-Invasive Intracranial Pressure Monitoring market across Asia-Pacific region.
