Global Nucleic Acid Amplification Testing (NAAT) Market is valued at approximately USD 2.5 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 10.4% over the forecast period 2020-2027. Nucleic Acid Amplification Test (NAAT) is an innovative technique used for the identification of a specific nucleic acid, bacteria, or virus, that act as a disease-causing pathogen from biologic samples, such as urine, tissues. etc. Furthermore, this technique is often utilized for blood screening donations to mitigate the risk of transfusion-transmitted infections in the recipients. Besides, nucleic acid amplification test is the precise detection technique used for most of the infectious agents, as it helps diagnose and improve patients care in high-income countries. Thus, it is extensively adopted over conventional diagnostic techniques for treating and curing infectious diseases, such as HIV and Ebola. According to the Joint United Nations Programme on HIV and AIDS (UNAIDS), in 2019, nearly 1.7 million individuals were newly affected by HIV, compared to a 2.8 million adult population in 1998. Thus, the rise in prevalence of HIV diseases throughout the world will foster the adoption for NAAT in the forthcoming period. Along with infectious diseases, NAAT is being extensively used across numerous other fields, including cancer, personalized medicine, and forensics. This is likely to spur the adoption & utility for NAAT during the forecast period. In addition, the rise in expenditure or investment in pharmaceutical and biopharmaceutical sector, along with escalating demand for the advanced diagnostic measure are the few factors responsible for the high CAGR of the market during the

forecast period. For instance, the Association of the British Pharmaceutical Industry (ABPI) estimated that the biopharmaceutical companies worldwide spent around USD 156.7 billion on R&D activities in 2016, representing an increase from USD 148 billion in 2015. Further, it is likely to grow around USD 181 billion by the year 2022. This, in turn, is likely to strengthen the demand for nucleic acid amplification testing (NAAT), thereby contributing to the market growth around the world. However, the high cost of test and shortage of skilled professionals are the major factors restraining the market growth over the forecast period 2020-2027.

The regional analysis of the global Nucleic Acid Amplification Testing (NAAT) market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the rising government support to implement Nucleic Acid Amplification Testing (NAAT), along with the significant presence of market vendors in the region. Whereas Asia-Pacific is anticipated to exhibit the highest growth rate / CAGR over the forecast period 2020-2027. Factors such as the rise in prevalence of life-threatening diseases and infectious diseases and rising adoption of innovative diagnostic technologies in the developing nations, such as China and India, are the few factors creating a lucrative opportunity for the growth of the Nucleic Acid Amplification Testing (NAAT) market in the Asia-Pacific region.
