Abstracts

Global Operational Technology Security Market is valued at approximately USD 15.2 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 19% over the forecast period 2023-2030. Operational Technology (OT) security encompasses a variety of technologies, procedures, and guidelines aimed at recognizing and minimizing risks to operational technology systems. These measures encompass activities such as partitioning networks, managing access, detecting intrusions, and preparing for incident response. OT security has gained significant importance due to the increased connectivity of industrial control systems, which has raised the risk of cyber-attacks and infrastructure disruptions. As a result, there is a growing emphasis on enhancing OT security through increased investment, collaboration, and best practices. The market is being driven by the rising adoption of cloud-based OT security solutions, government initiatives in security standards, and the growing demand for cyber threat modeling solutions.

Supportive government policies and increased investments by public and private authorities in security standards have a positive impact on the growth of the Operational Technology Security Market. For instance, in July 2020, the release of advisories by

organizations such as the National Security Agency and the Cyber Security & Infrastructure Security Agency increased awareness of cybersecurity threats and enhanced service performance and safety standards. Furthermore, in February 2023, the Technology Modernization Fund raised over USD 650 million, focusing on enhancing cybersecurity and digital services, driving the growth of global Operational Technology Security Market. Additionally, increasing connectivity of industrial operations to the Internet and rise in work-from-home activities and the widespread availability of broadband, are expected to create ample opportunities for market growth in the forecast period. However, the high cost of operational technology security stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Operational Technology Security Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to the adoption of OT security solutions by government authorities and cybercrime agencies. These solutions help streamline security operations, thereby driving market expansion within the region. Asia Pacific is expected to grow significantly over the forecast period, owing to factors such as rapid industrialization, increasing cybersecurity concerns, government initiatives, digital transformation, and economic growth. The region's expanding industrial infrastructure and rising cyber threats drive the demand for OT security solutions to protect critical operations, making it a prominent market for OT security.
