Abstracts

Global Opioid-Induced Respiratory Depression Market is valued approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. Opioid-Induced Respiratory Depression can be defined as breathing difficulties caused due to overdose of opioids. Opioids are a class of drugs that include the illegal drug heroin, synthetic opioids such as fentanyl, and pain relievers available legally by prescription, such as oxycodone, hydrocodone, codeine, morphine etc. The rising incidences of opioid use and drug overdose and increasing prevalence of hypoventilation syndrome as well as recent product launches and favorable government policies are accelerating the global market demand. For instance, according to World Health Organization – as of 2021, Worldwide drug use caused 500,000 deaths. More than 70% of these deaths are caused due to opioids, whereas 30% of deaths caused by overdose of opioids. Furthermore, In August 2021, FDA approved use of higher dose naloxone hydrochloride nasal spray for treatment of opioid overdose. Moreover, In December 2021, Switzerland based Sandoz launched authorized generic version of Narcan®(naloxone hydrochloride) Nasal Spray in United States. This new drug is intended to reverse opioid overdose. This spray would be available through retail pharmacies and hospitals . Also, growing number of

rehabilitation activities and rising R&D activities towards development of new therapeutics solutions are anticipated to act as a catalyzing factor for the market demand during the forecast period. However, high treatment cost associated with respiratory depression impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Opioid-Induced Respiratory Depression Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the growing prevalence of opioid-induced respiratory depression and presence of leading market players. Whereas, Asia Pacific is anticipated to exhibit a significant growth rate over the forecast period 2022-2028. Factors such as rising pharmaceuticals sector and increasing number of rehabilitation centers in the region, would create lucrative growth prospects for the Opioid-Induced Respiratory Depression Market across the Asia Pacific region.
