Abstracts

Global Organ Transplant Rejection Medication Market is valued at approximately USD 4.9 billion in 2022 and is anticipated to grow with a growth rate of more than 3.9% over the forecast period 2023-2030. Organ transplantation is a surgical procedure in which tissue, or an organ is transferred from one person's body to another person's body. Organ transplant rejection medication is used to prevent organ rejection in transplant recipients. The rising incidence of chronic disease and the increased incidence of organ failure are the key factors responsible for the market growth of the Organ Transplant Rejection Medication Market over the forecast period.

According to the Health Resources and Services Administration. In 2022, in the U.S., more than 42,887 organ transplants were performed and it's an increase of 3.7% over 2021. Also, according to the Department of Health & Human Services, in Mar 2023, approximately 104,234 patients across the globe were waiting to receive organs for transplant. Thus, the rising incidence of chronic disease and the increased incidence of organ failure are fueling the market demand across the globe. Also, advancements in technology, such as new surgical techniques and immunosuppressive drugs and a rise in the number of organ donors accelerate market growth. Moreover, increased awareness about the benefits of organ transplantation in an aging population and an increase in funding for research and development are anticipated to create lucrative

growth opportunities for the market. However, the high cost and complex procedures stifle market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Organ Transplant Rejection Medication Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in terms of revenue owing to factors such as the rising incidence of chronic disease, favorable reimbursement policies, technological advancement and the presence of advanced healthcare infrastructure create market growth in this region. Asia-Pacific is the fastest-growing region due to increasing incidence of chronic diseases, rising healthcare expenditure, rise in affordability and increased awareness about organ rejection medications in the region.
