Abstracts

Global Organic Chemicals Market is valued approximately USD 7.52 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 4.43 % over the forecast period 2021-2027. Organic chemicals are any chemical substances that are created by laboratory or industrial chemical procedures. They might be either pure or mixed compounds. Organic chemicals encompass nearly all carbon-containing substances. Over the projected period, the global organic chemicals market is likely to be driven by increasing industrialization and rapid urbanization. In addition to that, increasing use of organic chemicals in food & beverages, cosmetics and pharmaceuticals industry has majorly driven the market for organic chemicals. According to Cefic Facts & Figures 2020, worldwide chemicals turnover was ?3,347 billion in 2018, with sales increasing by 2.5 percent from ?3,266 billion in 2017 to ?3,347 billion in 2018. According to the CBI, Ministry of Foreign Affairs Europe, the European natural cosmetics market was valued at ?3.6 billion in 2018. However, growing concern about the negative health and environmental consequences of the production and usage of organic compounds and government-imposed stringent regulations on the manufacture, usage, import, and export of numerous hazardous chemicals hamper the growth of the market over the forecast period of 2021-2027. Also, technological advancement and increasing government and non-governmental organizations investment on drug development is likely to increase the market growth during the forecast period.

The global organic chemicals market is segmented into main regions such as Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share because of widespread usage among end-use sectors and growing use of organic chemicals as raw materials in the production of downstream products. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate over the forecast period 2021-2027. Factors such as developing economies, strong manufacturing base and rapid industrialization in the region would create lucrative growth prospects for the Organic Chemicals market across Asia-Pacific region.
