## Abstracts

Global Organic Fertilizers Market is valued approximately at USD 8.87 Billion in 2020 and is anticipated to grow with a healthy growth rate of more than 12.08% over the forecast period 2021-2027. Organic fertilizers are fertilizers derived from animal matter, human excrete and vegetable matter such as compost, manure, etc. Globally, more than 2 billion tonnes of municipal solid waste and 7-10 billion of urban solid waste are generated. The wastages are used as a raw material for the production of organic fertilizers. The adverse effects of chemical fertilizers on the soil and increasing awareness about organic fertilizers is driving the market demand. The increased practice of organic farming has also driven the growth of the market. But the fertilizers market has faced disruption due to the impact of COVID-19 pandemic which has restrained the market growth. Also, Government initiatives and schemes to support and promote organic farming is giving opportunities to the market to grow. For instance: - Mission Organic Value Chain Development for North Eastern Region (MOVCDNER) is promoting 3rd party certified organic farming of niche crops in the north east region through Farmers Producer organizations (FPOs) with focus on exports. Farmers have been given assistance of Rs. 25000/ha/3 years for organic inputs including organic manure and bio fertilizers etc. Continuous research and development by the market players to improve the quality of their products, in line with the increased demand for value-ensuring produce is also expected to propel the market forward.

The key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World are considered for the regional analysis of global Organic Fertilizers

market. Asia Pacific is the dominant market and had the largest share in 2020, owing to the increasing health awareness, huge areas under organic cultivation, rapid population and income growth and the presence of several organic operators. The demand for organic fertilizers is expected to rise in North America in the forecasted period.
