Abstracts

Global Orthopedic Implants Market is valued at approximately USD 41.20 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 5.0% over the forecast period 2022-2029. Orthopedic implants are devices made of metal alloys like titanium and stainless steel that are used to repair or support a broken bone. The demand for these devices is predicted to increase due to the rising frequency of orthopaedic illnesses and the rising number of orthopaedic surgeries. The Orthopedic Implants market is expanding because of factors such as prevalence of orthopedic diseases, growing geriatric population.

The risk of bone diseases, fractures, and bone porosity increasing with age are among problems that make geriatrics a suitable patient population for orthopaedic implants. According to the World Bank Group, the world's old population was 727 million in 2020, and it is predicted to treble over the next three decades, reaching 1.5 billion in 2050. Furthermore, the market is predicted to be driven by the rising number of orthopaedic treatments and different government initiatives to facilitate reimbursements for the patient population. For instance, a study published in the Journal of Bone and Joint Surgery in 2021 revealed that the average payment by the Medicare program for orthopedic surgery was reported to be 10.5% of the treatment cost. It is anticipated that the market for orthopaedic implants will grow more quickly as a result of governments in development of novel implants is creating lucrative opportunities for the market growth over the

forecast period of 2022-2029.

The key regions considered for the Global Orthopedic Implants Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the prevalence of orthopedic disorders, and increasing geriatric population. Whereas Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as rising geriatric and target disease, an increase in the number of collaborations for products development, geographic expansion of key players, and active participation of government and nonprofit organizations in the market space.
