Abstracts

Global Orthopedic Splints Market is valued at approximately USD 1.45 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 8.9 % over the forecast period 2021-2027. Orthopedic Splint is a device used to maintain the injured part. It helps to protect, immobilize, and restrict motion in a part. Orthopedic splints are used in hospitals, specialty centers etc. The increasing number of musculoskeletal disorders has led to the adoption of Orthopedic Splints across the forecast period. For Instance: according to the World Health Organization in 2021, the cases of bone fracture and musculoskeletal disorders are increasing rapidly due to growing geriatric population. Globally about 1.71 billion people are having musculoskeletal problems. Rising bone fracture cases push the growth of orthopedic splints market. Also, with the increasing geriatric population, the adoption & demand for Orthopedic Splints is likely to increase the market growth during the forecast period. However, lack of awareness towards minor injuries impedes the growth of the market over the forecast period of 2021-2027.

The geographical regions considered for the global Orthopedic Splints market analysis includes Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is deemed as the significant region across the globe in terms of huge market share due to increasing cases of injuries and bone fracture, rising awareness towards minor injuries etc. Whereas, Asia-Pacific is also estimated to attain a maximum

growth rate during 2021-2027. Factors such as increasing geriatric population, rising cases of musculoskeletal disorders etc. would create beneficial growth forecasts for the Orthopedic Splints market across Asia-Pacific region.
