Global Paper Bottles Market is valued approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2021-2027. Paper bottles are made from biodegradable materials like paper, which is easily decomposable and non-pollutant, whereas in case of the plastic bottle it creates air pollution along with water pollution. Paper bottles are also made from plant pulp and plant-based fibers. Paper Bottles market is mainly driven by increasing focus over green packaging trend and shifting Consumer preference towards sustainable products. For instance, according to PepsiCo (Leading Food and Beverage Company)- In July 2020 PepsiCo has partnered with consumer goods companies Unilever, Diageo and Pilot Lite to develop and scale the world's first recyclable paper bottle. Also, in July 2020 – A Frugalpac (UK based sustainable packaging company) has launched a wine bottle. the bottle has been made from 94% recycled paperboard and has 84% less carbon footprint than that of glass. Also, as per an article from World Economic Forum- The economic benefits of implementing best practice in packaging design such as packaging made from recycling material is estimated at USD 2 – USD 3 billion annually across OECD countries. Also, with the growing demand from end use industries such as beverages and commercial packaging, the adoption & demand for Paper Bottles is likely to increase the market growth during the forecast period. However, slow adoption rate and low recycling yield of paper, impedes the growth of the market over the forecast period of 2021-2027.
