## Abstracts

Global Para Nitrochlorobenzene Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. The most widely used generic drug in the world, paracetamol, is produced using para nitrochlorobenzene as one of the main raw components. 4-Nitrochlorobenzene, commonly known as para nitrochlorobenzene, is solid with a pale yellow colour. Several industries employ the chemical compound nitrochlorobenzene. It serves as an intermediary for other compounds that are also employed in the production of rubber. This medicine has completely changed how leprosy is treated, a condition that can be irritating at times. A common anti-leprosy medication is currently dapsone, which is manufactured from this molecule. Moreover, it is employed in the fabrication and production of fertilizers, dyes, paints, and coatings. The market growth is driven by key factors such as improvement in benzene production and supply chain and increasing demand for generic medicine.

For instance, as per Statista, sales of generic prescription drugs globally in 2020 were estimated to be worth 74 billion US dollars. Global sales of prescription generics are anticipated to approach \$100 billion by 2026. Generic medicines are considerably less expensive versions of original branded medicines that no longer have a patent. The use of generic medications rather than branded ones with patent protection might result in enormous financial savings. On the other side, according to the same source, India produced about 12,720 metric tons of isobutyl benzene in the fiscal year 2021. This was an increase over the previous year of roughly 35%. However, health & environmental

hazards and substitution in end-use industries stifle market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Para Nitrochlorobenzene Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. Asia Pacific is leading the worldwide market share owing to increasing demand for dyes from the textile sector and pesticides. On the other side, North America is expected to be the fastest growing region due to the prevalence of various manufacturers along with increasing consumption of the product in the region.
