## **Abstracts**

Global Parcel Delivery Market is valued at approximately USD 540 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 8.00 % over the forecast period 2022-2028. Parcel can be defined as goods or objects wrapped in paper, or sealed in an envelope, or a box and the process of delivering a parcel to a particular destination via road, rail or air is known as parcel delivery. The increase in penetration of the internet and expansion of the e-commerce industry has led to the adoption of Parcel Delivery across the forecast period. For Instance: as per Statista, with over 560 million internet users, India is the second-largest online market in the world, ranked only behind China. It was estimated that by 2023, there would be over 650 million internet users in the country. Despite the large base of internet users, the internet penetration rate in the country stood at around 50 percent in 2020. This meant that around half of the 1.37 billion Indians had access to the internet that year. Also, with the rise in globalization, the adoption & demand for Global Parcel Delivery is likely to increase the market growth during the forecast period. However, rise in transportation costs impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the Global Parcel Delivery market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. Europe is the leading region across the world in terms of market share as this region is home to major industries and automobile manufacturers. Whereas, Asia-Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. Factors such as increase in demand for parcel delivery, as these countries have high export and import of goods, would create lucrative growth prospects for the Parcel Delivery market across

Asia-Pacific region.
