Abstracts

Global Particle Therapy Market is valued at approximately USD 625.69 million in 2021 and is anticipated to grow with a healthy growth rate of more than 8.2% over the forecast period 2022-2028. Particle therapy is a type of external beam radiotherapy that uses beams of energetic protons, neutrons, or any other heavy positive ions to cure cancer. Factors such as increasing incidences of cancer, rising adoption of particle therapy in clinical trials, the advent of novel technologies, and a growing number of particle therapy centers worldwide are the primarily attributing to the growth of the market. For instance, according to the National Cancer Institute, in 2018, the total number of cancer patients is accounted for 18.1 million cases and the figure is projected to rise and likely to reach 29.5 million cases. Consequentially, the rising prevalence of cancer is fueling the demand for Particle Therapy, which, in turn, accelerates the market growth across the globe. However, the growing risk of exposure to radiation and infrastructural challenges in healthcare facilities impede the growth of the market over the forecast period of 2022-2028. Also, increasing demand for particle therapy in emerging markets and growing healthcare expenditure are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global Particle Therapy Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. Asia-Pacific is the leading region across the world in terms of market share owing to the presence of

the huge patient pool and growing initiatives to promote the adoption of advanced particle therapy technologies. Whereas, North America is anticipated to exhibit a substantial growth rate over the forecast period 2022-2028. Factors such as the rising preference for particle therapy owing to the various benefits offered compared to other procedures, as well as, the availability of favorable reimbursement scenarios, would create lucrative growth prospects for the Particle Therapy Market across the North American region.
