Abstracts

Global Pediatric Neuroblastoma Treatment Market is valued at approximately XX in 2021 and is anticipated to grow with a healthy growth rate of more than 6% over the forecast period 2022-2028. The most common type of extracranial solid tumour in children is neuroblastoma. The rising prevalence of neuroblastoma in children, as well as increased research and development and increased awareness of available cancer treatments, are all contributing to the market's growth. Neuroblastoma is estimated to affect one out of every 7,000 live births, according to a National Cancer Institute article published in February 2022. In children under the age of 15, the annual incidence is 10.54 cases per 1 million. Around 37% of patients are diagnosed as infants, and 90% are under the age of 5, with a median age of 19 months at diagnosis. Furthermore, the government's increasing investments in research and development programmes to develop the medical infrastructure in the paediatric section, as well as increased awareness of paediatric neuroblastoma treatment, are boosting the market growth. Furthermore, increasing investments in evaluating the efficacy of chemotherapy in paediatric neuroblastoma will propel the market forward. For example, in January 2022, Jason Shohet, MD, PhD, was awarded a new two-year USD 300,000 Scholar Hope Grant to focus on drug resistance in neuroblastoma chemotherapy treatments. It is a cancer of the peripheral nervous system that is fatal in children. However, the high cost of paediatric neuroblastoma treatment is a significant impediment to market expansion.

The key regions considered for the global Pediatric Neuroblastoma Treatment market study include Asia Pacific, North America, Europe, Latin America, and Rest of the

World. Throughout the forecast period, North America is expected to dominate the overall market. The high prevalence of paediatric neuroblastoma in the region, as well as established healthcare infrastructure, are some of the key factors responsible for the region's large market share. Additionally, favourable government initiatives and an increase in the number of research partnerships are expected to drive market growth. The Asia Pacific (APAC) region, on the other hand, will grow at a steady pace over the forecast period. Increased public investment and improvements in healthcare infrastructure will be attributed to this growth.
