Abstracts

Global Pediatric Ultrasound Market is valued approximately USD 0.37 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 4.7% over the forecast period 2022-2029. Pediatric Ultrasound is a type of ultrasound imaging that uses sound waves to produce images of organ and tissues inside the body of a child. It is utilized for diagnosis and treatment of different medical conditions in children. The increasing incidence cardiac diseases in children and growing demand for non-invasive treatment procedure as well as strategic initiatives from leading market players are key factors accelerating the market growth.

According to the Centers for Disease Control & Prevention estimates – as of 2020, around 27% of children in the United States affected by a chronic condition and 1 in 15 have multiple chronic conditions. Moreover, as per Texas Heart Institute estimates – around 3% of children in the United States have high blood pressure and approximately and around 15% have high cholesterol levels. Also, rising healthcare infrastructure in developing region and growing paediatric population would create lucrative growth prospectus for the market over the forecast period. However, the dearth of skilled professionals and high cost associated with ultrasound devices impede the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Pediatric Ultrasound Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the leading region in terms of market share due to presence of leading market players and availability of robust healthcare infrastructure in the region. Whereas Asia Pacific is expected to grow significantly during the forecast period, owing to factors such as rising pediatric population and growing prevalence of chronic diseases in the region.
