Abstracts

Global Peptide and Anticoagulant Drug Market is valued at approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 3.3% over the forecast period 2021-2027. Peptides are a specific type of medicine made up of proteins called amino acids that are linked together by a peptide bond. Peptides therapeutics are known to play a significant part in any biological process, and as a result, they are in great demand for pharmacological usage. Whereas, anticoagulants are a family of therapeutics that aid in the reduction or prevention of blood clotting. The Peptide and Anticoagulant Drug market is driven by key factors such as growing investments in research and development of novel drugs and rising prevalence of cancer and metabolic disorders. Furthermore, increased healthcare costs, an ageing population, and the rise of chronic illnesses propel the peptide and anticoagulant drugs market. According to GLOBOCAN cancer statistics predictions of incidence and mortality worldwide for the year 2020, a total of 19.3 million new cancer cases were detected globally, with 9.9 million deaths due to cancer, according to an article published by the National Center for Biotechnology Information. In addition, by 2040, the number of new cancer cases worldwide is predicted to reach 28.4 million. Chronic illnesses, such as cardiovascular diseases, cancer and diabetes are the main global causes of mortality and disability, according to important facts issued by the World Health Organization (WHO) in April 2021. However, high cost of developing drugs impedes the growth of the market over the forecast period of 2021-2027.

The geographical regions considered for the global Peptide and Anticoagulant Drug market analysis include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is leading the market owing to significant factors such as increasing prevalence of cardiovascular disorders and high demand for peptide and anticoagulants drugs. However, Asia Pacific is projected to record the fastest growth in the upcoming years due to increasing tobacco use within the population and rising prevalence of cancer in the forecast years 2021-2027.
