Abstracts

Global Peptide Therapeutics Market is valued at approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. Peptide therapeutics are a type of polypeptides or peptides that is primarily used to cure a wide range of diseases such as cancer, cardiovascular diseases, infections, respiratory disorders, and many others. The growing incidences of cancer and metabolic disorders, the introduction of novel drugs, and increasing spending on healthcare activities are some prominent factors excelling the global market growth. For instance, according to the National Cancer Institute, the number of cancer patients is expected to rise to 29.5 million cases by the year 2040 from 18.1 million cases in the year 2018. Consequentially, the growing cases of cancer are fueling the demand for the Peptide Therapeutics, which, in turn, augments the market growth across the globe. However, the imposition of stringent regulations for drug approval and the high cost of developing drugs impede the growth of the market over the forecast period of 2022-2028. Also, the rising research and development activities and technological advancements are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global Peptide Therapeutics Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North

America is the leading region across the world in terms of market share owing to the growth of the biotechnology industry and rising focus on the introduction of novel drugs. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the increasing investments in research and development activities, and the rising incidences of cancer, would create lucrative growth prospects for the Peptide Therapeutics Market across the Asia-Pacific region.
