Abstracts

Global Personalized Medicine Biomarkers Market is valued at approximately USD 11.76 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 15.51% over the forecast period 2022-2029. Personalized medicine biomarkers are essential tools that are specially designed for the selection of suitable patients for treatment with certain drugs and allow them personalized medicine. It emphasizes on offering appropriate treatment to the right patient, at the right dose at the right time. The growing prevalence of chronic diseases, rising awareness and significance of analyzing the prognosis and selection of dose, and increasing requirement of providing early diagnosis and treatment are attributing to the market demand around the world.

The surging demand for personalized medicine is directly associated with the demand of personalized medicine biomarkers in the global market. As per Statista, it is estimated that the global market for personalized medicine was worth approximately USD 1,980 billion in 2019 and is expected to reach USD 2,770 billion by the year 2022.
