Global pet cancer therapeutics market is expected to reach \$432.8 million by 2027. Global pet cancer therapeutics market is valued approximately at \$226.25 million in 2020 and is anticipated to grow with a healthy growth rate of about 9.71% over the forecast period 2021-2027. Pet cancer therapeutics deals with the novel anti-cancer drugs that are used in the cancer treatment and is capable of suppressing effects of cancerous cells and restricting their growth in animals such as cats, dogs, etc. The global pet cancer therapeutics market is being driven by prevalence of several types of cancers in cats and dogs and increase in animal health awareness. Furthermore, there have been different initiatives taken place for research and development regarding pet cancer management which will provide new opportunities for the global pet cancer therapeutics industry. For instance, according to the American Association for the Advancement of Science, in 2021, a research driven pharmaceutical company named Merck Animal Health has granted \$0.1 million to Morris Animal Foundation to support research in animal cancer that would help to advance animal cancer care. Also, in 2017, the University of Queensland received a grant worth \$2.5 million from the Australian Cancer Research Foundation (ACRF) for the examination of effects of small doses of anti-cancer drugs in animal as well as human cancers at a cellular level. Such research and development activities related to pet cancer management is expected to drive the market by increasing the adoption of pet cancer therapeutics. However, side effects caused by drugs used for the treatment of pet cancers may impede market growth over the forecast

period of 2021-2027.

The regional analysis of the global pet cancer therapeutics market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the leading region across the world in terms of market share due to increasing pet adoption, growth in per capita animal healthcare expenditure, prevalence of different animal diseases and injuries, etc. in the region. Whereas Asia Pacific is anticipated to exhibit the highest growth rate over the forecast period 2021-2027, due to growing awareness as well as availability of different pet cancer medicine etc. across the region.
