Abstracts

Global Pet Food Processing Market is valued at approximately USD 4.85 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 5.0% over the forecast period 2022-2028. Pet Food Processing is a technology that deals with animal feed which is intended to consume by pets. Pet Food Processing Industries just like normal Food Processing industries transform the animal feed into food or a form of food, using various methods in order to preserve it and make it consumable. Increasing awareness among pet owners to feed their pets with healthy food, growing investment in the Pet Food Processing market and growing acceptance of Pets, have driven the adoption of Pet Food Processing across the projected period. For Instance: According to the National Pet Owners Survey (2019-20) performed by the American Pet Products Association (APPA), more than 85 million households in the United States had one or more pets. Also, advancements in technology used in Pet Food Processing and re-emergence of convenience food for pets, are most likely to boost the overall growth of the Pet Food Processing Market. However, depriving capacities of equipment used in Pet Food Processing can obstruct the market's expansion over the projection period of 2022-2028.

The key regions considered for the Global Pet Food Processing Market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world. Rise in pet adoption and rise in

disposable income are driving the market growth in North America. Whereas, Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. The market is expected to grow during the projected period, due to growing awareness among pet owners towards healthy pet foods.
