Global Pharmaceutical Granulation Equipment Market is valued at approximately USD XXX million in 2021 and is anticipated to grow with a healthy growth rate of more than 5.5% over the forecast period 2022-2028. Granulation is the binding of tiny particles into bigger, stable masses in which the constituent particles may still be recognized. Increasing the flow of the material from the hopper during the compression of the tablets, improving the packaging of the dry suspension granules in the final containers, and creating a surface for coating drugs in sustained and extended-release dosage forms, the process aims to improve manufacturing processes. The market growth is driven by key factors such as growing Healthcare R&D Expenditure and increasing Number of Research Laboratories. For instance, the pharmaceutical industry spent USD 83 billion on research and development in April 2021, according to the article 'Research and Development in the Pharmaceutical Industry.' The increase of innovative drug discoveries is shown by the large expenditure on research and development. Also, according to Clinicaltrials.gov's April 2022, updated statistics, there are presently 410,319 registered studies, including 169,924 medication or biologic studies and 61,961 recruiting studies with sites across all 50 States and 220 countries. As a result, the large number of medication trials is projected to increase the need for pharmaceutical

granulation equipment throughout their development phase. Moreover, technological advancements in the form of automation of granulation process and growing demand for advanced pharmaceutical drugs create lucrative opportunities in the upcoming years. However, high cost of equipment impedes the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Pharmaceutical Granulation Equipment Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is leading the Pharmaceutical Granulation Equipment Market, owing to the increased investments and initiatives by public and private organizations. However, Asia Pacific is expected to be the fastest growing region due to increasing number of generic manufacturers in this region.
