Global Phenylalanine Market is valued approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. The Phenylalanine can be defined as essential amino acid found in humans. The body cannot synthesize its own phenylalanine. Instead, humans must get phenylalanine from the food sources. Phenylalanine offers several health benefits such as enhances production of the neurotransmitter norepinephrine and dopamine. It also improves the production of the pigment melanin, that offers color to the skin, hair, and eyes etc. There are three forms of phenylalanine - D-phenylalanine, L-phenylalanine, and the mix made in the laboratory called DL-phenylalanine. The rising prevalence of mental illnesses and increasing incidences of joint disorder and chronic pain as well as recent product launches are factors that are accelerating the global market demand. For instance, according to Parkinson's Foundation – as of 2020, around 1 million U.S. individuals are living with Parkinson's disease (PD), and this number is further projected to grow to 1.2 million by 2030. Furthermore, in July 2021, Ajinomoto launched a new phenylalanine supplement named “Nou-Katsu seven amino”. Also, growing pharmaceuticals industry in emerging economies and favorable government initiatives are anticipated to act as a catalyzing factor for the market demand during the forecast period. However, certain health risks and side effects associated with consumption of Phenylalanine such as heart burn, nausea, constipation, dizziness, and headache

among others impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Phenylalanine Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the growing prevalence of joint disorders and chronic pain and presence of well-established healthcare infrastructure in the region. Whereas, Asia Pacific is anticipated to exhibit a significant growth rate over the forecast period 2022-2028. Factors such as the thriving growth of food and beverages sector and rising pharmaceuticals industry, would create lucrative growth prospects for the global Phenylalanine Market across the Asia Pacific region.
